## **Alarm before intruder breaks-in!**

ALEAN infrared beam barrier, which is designed to protect the perimeter of a building. Window and doors have been secured only by magnetic contact or glass break detectors. Now, this detector provide a solution to protect the exterior before entry is attempted.

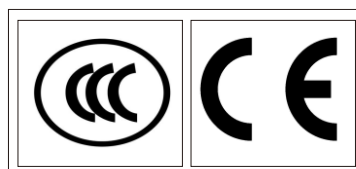

## SPECIFICATIONS

|                     |                                    |
|---------------------|------------------------------------|
| Model               | ABI                                |
| Detecting distance  | 10-100m                            |
| Height              | 48-204cm                           |
| Beams               | 2-12 beams                         |
| Light source        | LED                                |
| Response speed      | 40msec                             |
| Alarm output        | Switch signal output(NO/NC)        |
| Tamper output       | 1B contact output, DC26V/0.5A Max. |
| Power and voltage   | DC10-18V                           |
| Operation current   | 30-90mA max                        |
| Working temperature | -25°C—55°C                         |

## FEATURES

- 1) NC/NO alarm output optional. Compatible with all security alarm system and other functions.
- 2) Pure digital circuit design, DSP digital chip programming, really reduce false alarm.
- 3) Easy alignment with LED indicators
- 4) Weather proof design, good performance against outdoor conditions. Resistant to rain, fog, snow and frost
