

Connect2Go: Envisalink 4

Professional IP Communicator with Full Interactive Services

The new **Envisalink 4** is a powerful TCP-IP based bus-level interface to DSC PowerSeries¹ panels and Honeywell Vista² panels. In addition to IP alarm communications with your central monitoring station, it allows your customers to view the status of and control their alarm panel through a standard web-browser or smart-phone.

DLS-2Go Enabled

The **Envisalink 4** enables downloading of any PowerSeries¹ panel over TCP/IP from anywhere in the world. This unique technology does this without the need of changes to the customer's networking equipment and even works with dynamic IP addressing.

Support for Home Automation

Through the built-in TPI (third party interface) the **Envisalink 4** is already compatible with many major home automation systems and numerous 3rd party Android and iPhone apps.

Free Connect2Go Service

Provide your customers with best-in-class Interactive Services at no monthly cost.

Module Features
