

Nice

Simplicity has come home!

Innovation and simplicity in the integrated management of home alarm and automation systems.

Nice

Home Automation

Nice is at the heart of the home.

With a single Nice transmitter, the alarm systems and automations for gates, garages, awnings and rolling shutters, as well as lighting and irrigation, are always under control. Perfect for either new buildings or in restoration work.

- Gates
- Garage Doors
- Barrier Gates
- Rolling Shutters and Awnings
- Solar screens
- Alarm systems

alarm stop

The desire to be protected must go together with a simplicity of usage and the feeling of a real advantage in terms of quality of life: NiceHome integrated management system is easy to use and intuitive, as any other Nice product.

The advantages of NiceHome wireless systems: systems require little time to be installed, they are cheap and flexible.

Wireless NiceHome solutions allow safe installations in very short times, even in the most complicated and frequent situations, as in case of interventions to plants that are not fitted for them. Creating a new system, enlarging it, adapting it to different requirements is very easy with NiceHome!

NiceHome preserves the beauty of every architecture

Putting all the elements of the traditional systems together in a single wireless control unit dramatically reduces the number and dimensions of the devices to install, minimising their visual impact. The radio system, eliminating all the physical connections between its various parts, avoids the need to pre-arrange the system during the phase of planning, as well as to carry out expensive and invasive brickwork or to lay wires in existing houses with ugly results.

Tranquillity, at all times.

Peace and comfort: NiceHome solutions to organise, deter, protect and give notification. Prevention is obviously the best solution: with NiceHome system you can have all the solutions for preventing undesirable events and limiting their consequences. However, a home equipped with NiceHome is also a lot more comfortable.

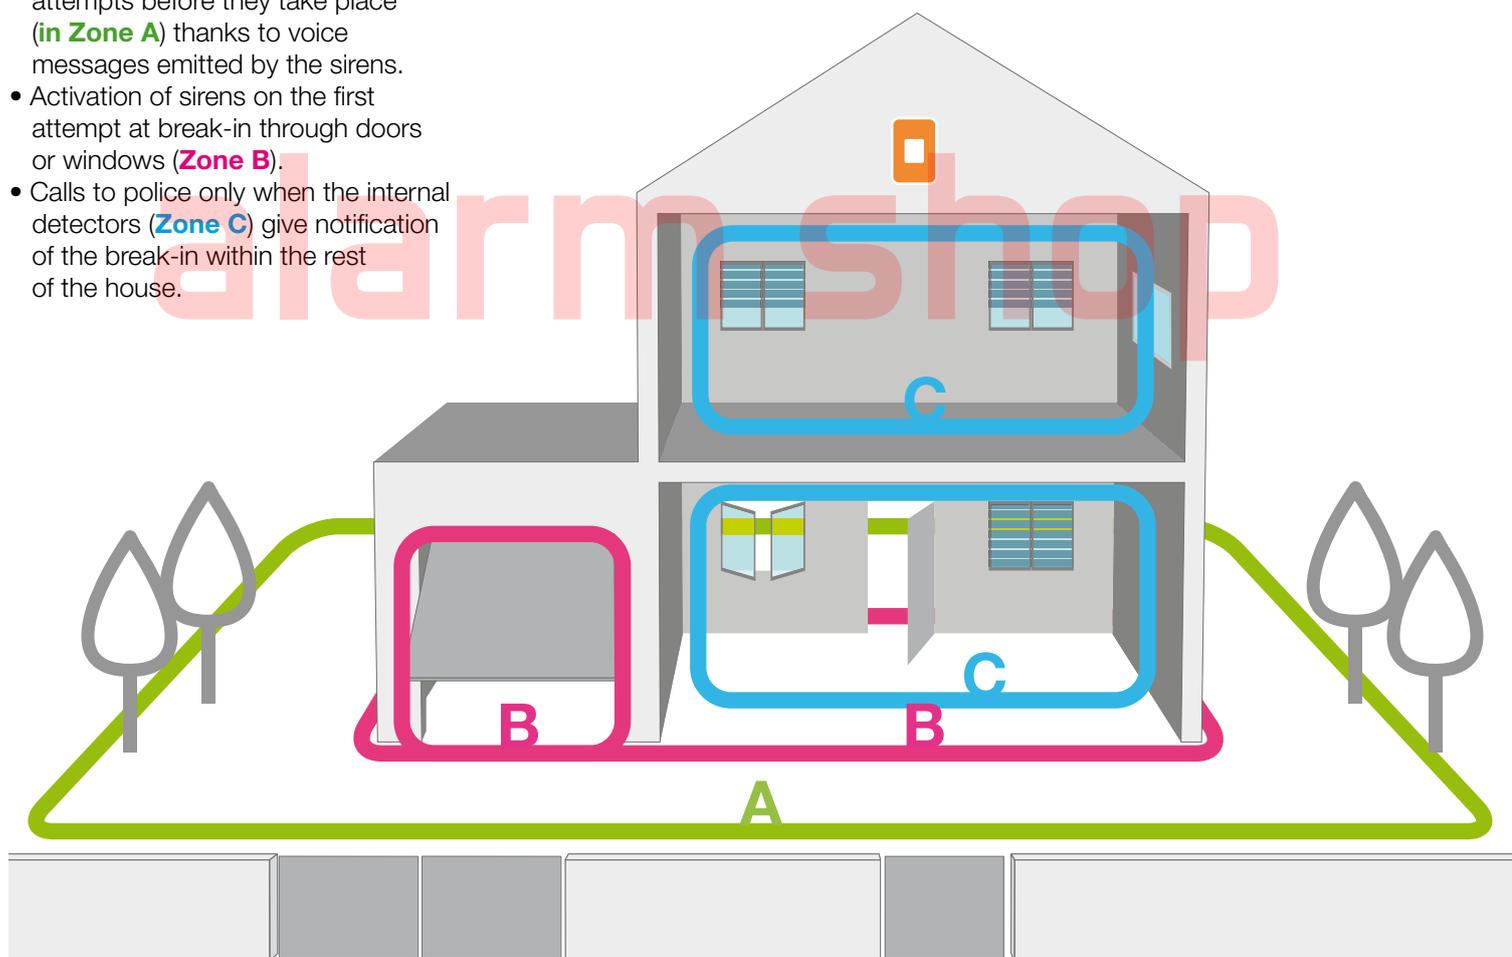

**All under control,
even from a distance.**

You can communicate from a distance with the NiceHome control unit in order to control its state via GSM or PSTN call. The differentiated organization of the alarms gives a different notification of attempted approaches to the property, burglary or breaking of frames, intrusion in protected rooms, incipient fire or flood and other anomalous or potentially dangerous events. The user can call the control unit and activate the sound interception functions.

A new concept for protecting today's homes.

Thanks to the system evolution and to the availability of new technologies, current trends enable the protection of an area, dividing it according to a concept of “**concentric circles**”.

- Deterrence from possible break-in attempts before they take place (in **Zone A**) thanks to voice messages emitted by the sirens.
- Activation of sirens on the first attempt at break-in through doors or windows (**Zone B**).
- Calls to police only when the internal detectors (**Zone C**) give notification of the break-in within the rest of the house.

Zone A, garden or veranda;
Zone B, external doors and windows;
Zone C, inside the home

The NiceHome range and domotic functions.

Safety and security

Radio transmitters Dual Band: with magnetic contact for detection of door and window opening; infrared, with volumetric lens, and dual technology movement supervision (infrared + microwave); detector of fine volatile powder, glass breakage and flooding.

Deterrent and Alarm

Sirens via radio for indoors; via radio for outdoors, bidirectional and Dual Band or with wire connection to the control unit, with built-in flashing light.

Control unit

Wireless or wired control units for combined or radio alarm systems. Dual Band, bidirectional with GSM telephone dialler.

alarm shop

Receivers

For control via radio of commands sent by NiceHome systems to turn lighting, activate heating and irrigation systems, boilers and all Nice automations for awnings and shutters.

alarm shop

Local organization

Control key-pad, wall-hung or portable, Transmitter 8 and 4-channel, bidirectional.

Remote organization

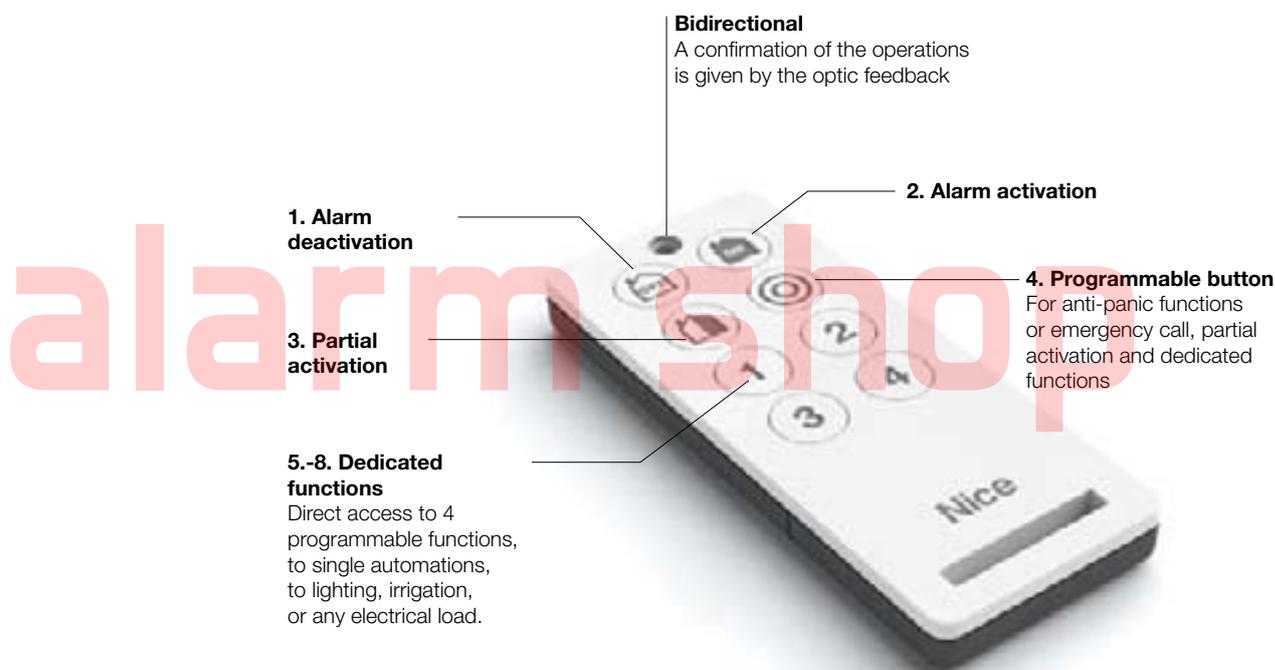

Tele Service Modem, voice messaging and sms.

..... RTG - GSM/GPRS

Alarm and automation control in a single system!

NiceHome, as well as the alarm system, can control up to 16 automations or groups of automations, assigning the required times and modes to each: to wake up in sunlight, protect geraniums from the sun, or to open and close everything at the required time, or when you are away from home.

Nice cares for the environment.
Using natural paper it avoids excessive use of raw materials and forest exploitation.
Waste is reduced, energy is saved and climate quality is improved.
